

ANKIT AGGARWAL

Executive Director, Product — Data Management

New York / New Jersey • 646-875-3601 • aggarwal.ankit5@gmail.com • [LinkedIn](#)

PROFESSIONAL SUMMARY

VP-level data product leader with 15+ years in financial services, driving enterprise data platforms, governance, lineage, and data-quality products from strategy through adoption. Owns multi-year roadmaps, OKRs, and value realization for firmwide capabilities across data contracts, business glossary, quality monitoring/remediation, and BCBS 239 controls. Hands-on technical fluency across modern data platforms, knowledge graphs, APIs, Python, SQL, and GenAI enables credible leadership from vision to execution.

CORE COMPETENCIES

Data Product Strategy: Product vision, multi-year roadmaps, OKRs, portfolio prioritization, adoption.

Enterprise Data Management: Semantics, Ontology, Data governance, lineage, data quality, data contracts, metadata, business glossary, and BCBS 239 controls

Executive Delivery: Regulatory execution, stakeholder alignment, cross-functional leadership, executive communication, and team coaching

TECHNICAL TOOLKIT

Data Platforms: Neo4j, Iceberg, Databricks, Snowflake, PostgreSQL, DBeaver

Engineering & Automation: Python, SQL, Cypher, REST APIs, Claude API, LLM agents and orchestration

Product Delivery Tools: Jira, Confluence, Figma, Lucid, monday.com

Cloud, Observability & Analytics: AWS services, Datadog, Tableau, Looker

PROFESSIONAL EXPERIENCE

JPMorganChase — New York, NY

Nov 2021 – Present

Executive Director, Technical Product Management — Enterprise Data Platforms, Governance & Data Quality (promoted to ED, 2024–25)

- **Led the product agenda for firmwide BCBS 239 data-lineage and data-quality tooling (2025–early 2026)** delivering end-to-end lineage capture, data-quality monitoring and remediation, data contracts, and business-glossary capabilities with controls-by-design; drove adoption across lines of business, Data, Risk, Legal, and Compliance and cut audit findings 50%.
- **Defined and shipped data-contract and data-quality standards** — quality rules, thresholds, ownership, and issue-management workflows — enabling consistent monitoring, remediation tracking, and data-quality risk reporting for regulatory and decision-critical data.
- **Partnered with Chief Data Office, technology, and product teams** to evolve the lineage process and tooling and align data-quality risk monitoring to firmwide expectations, building consensus across a large, matrixed, regulated environment and communicating progress to senior leaders.
- **Own the product vision, multi-year strategy, and outcomes-based roadmap** for enterprise data-platform capabilities serving 3 lines of business and multiple corporate functions; launched [Fusion](#) to external clients 0-to-1 (May 2022), now an industry-recognized data platform growing monthly active users ~100% YoY.

- **Delivered self-serve data infrastructure and integration patterns** for data engineers, analysts, and data scientists, cutting time-to-value for a new data product from 21 days to 6 hours and cost-to-serve 60% through improved data modeling and tooling consolidation.
- **Built, hands-on, a production AI agent (Python + Claude API)** that automates the end-to-end data-product lifecycle, including metadata, lineage, and data-quality steps, compressing weeks of manual work into under an hour.
- **Define product metrics, OKRs, and value realization (ROI)** and led firmwide GenAI adoption ([LLM Suite](#), 250K+ users in 2024); coach a team of product managers and manage executive stakeholders across Engineering, Architecture, Data, Risk, Legal, and Compliance.

meZocliq (Start-Up)

Jan 2014 – Oct 2021

Director, Technical Product Management — Self-Serve / No-Code Data Management Platform

- **Delivered a 0-to-1 low-code data platform** in true startup mode — with no pre-existing product function — enabling non-technical “citizen developers” to self-serve the full data lifecycle: ingest, transform, query, analyze, and report on complex data.
- **Built the platform’s data-management layer** — metadata capture, data profiling and quality checks, and transformation lineage — so users could trace data from source to report and trust the outputs.
- **Ran user research and customer discovery hands-on** — live demos, POCs, MVPs, and pitch decks — translating insights into a prioritized, outcomes-based backlog and solutioning prospect use cases with deep user empathy to accelerate conversion.
- **Built reusable integration patterns** with BlackRock Aladdin, Bloomberg, FIS, PeopleSoft, and Profisee (MDM / reference data), standardizing how reference and master data flowed into the platform and cutting client integration effort and cost 2x.
- **Instrumented product analytics and KPIs**; used telemetry and usability testing to remove friction across mapping, load, profiling, and data-quality checks.

iQor

Aug 2006 – Dec 2013

Product Manager — Data & Reporting Products (progressed from Analyst; promoted to Product Manager, 2010)

- **Led data integrations for the internal data & reporting platform (Qorus)**; shipped Phase 1 in a record 6 months, recognized among the best tools within a major internal technology initiative.

EDUCATION

Chief Product Officer Program — Massachusetts Institute of Technology (MIT), Boston, MA **Expected 2027**

Post Graduate MBA, Marketing — Institute of Management Technology, India **2013**

Bachelor’s in Computer Applications — Thiruvalluvar University, India **2008**

CERTIFICATIONS

Certified Neo4j Professional (2022) • Generative AI for Everyone, DeepLearning.AI (2023) • Python 3 Programming & Statistics with Python, University of Michigan (2020) • Improving Your Product Sense, Shreyas Doshi (2025)
